## Fruit Fly Treatment Prep Sheet

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. **Please be prepared to leave the immediate area if needed during and after treatment.** If you notice wet product, please refrain from entering this space until it has dried. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

Fikes reserves the right to deny treatment if property is improperly prepared according to these instructions. Treatment charges may still be applied.

### How To Prepare For The Service:

Please take the following steps prior to our service to ensure that we can treat accordingly:

- Be prepared to show the technician all the problem areas upon our arrival.
- Any food, food prep, or dishes need to be removed or sealed away in the area to be treated.
- Ensure that problem areas are cleared of clutter, and floors are swept and free of debris to allow for proper treatment.
- Do not use any over the counter or organic pest control products prior to or after our service; doing so may prevent our chemicals from working properly.
- Do not pour boiling water or chemicals down drains the nights after a treatment is performed; it's imperative the treatment is given time work before any chemicals or hot water is used in the drains.
- In most cases, thorough and consistent sanitation is key to riding the area of fruit flies.

### What You Can Expect From The Treatment:

The treatment will remain effective only if the following steps are taken after your home is serviced:

- DO NOT use other pest control chemicals (powders or sprays) or cleaning products anywhere where treatment was applied (treatment will be applied on and around drains, under and behind appliances, as well as in trash cans).
- Remove all competing food sources (this means keeping all food put away or in sealed containers, cleaning up spills as they occur, removing trash on a regular basis, etc.).
- Please allow at least 7 days for the product to take effect. Our team will use a combination of spray chemicals, fly bait, and enzymes for treatment. To assist in killing the fruit flies, your team can pour boiling water down the drains, but please wait several days after the treatment before doing so to ensure the product has time to work without being washed away. Maintaining good sanitation and cleanliness is essential to fully eliminate flies; ensure that all organic material in

the restaurant is sealed or disposed of properly to prevent fly breeding and feeding, and keep floors and drains dry and free of any debris. If you notice any signs of fly activity after 7 days, please report this so that a follow-up treatment can be arranged if necessary.
