Stored Product Pest Treatment Prep Sheet

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. **Please be prepared to leave the home for up to 4 hours.** If you notice wet product, please refrain from entering this space until it has dried. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

Fikes reserves the right to deny treatment if property is improperly prepared according to these instructions. Treatment charges may still be applied.

How To Prepare For The Service:

Please take the following steps prior to our service to ensure that we can treat the most spaces during our time:

- Empty out all upper and lower cupboards as well as empty all drawers of cutlery, towels, etc.
- Clean and clear off all of your counter tops of all dishes, pots, pans, cans, boxes, food, etc.
- Ensure that you keep all removed items within the kitchen area for possible inspection, ie: on the kitchen table.
- Inspect all of your dried food items for infestation. Infested foods should be immediately disposed of, or placed in the freezer for at least one week to kill potential pests. Foods not infested should be placed in plastic containers with tight fitting lids.
- Pets need to be removed from infested area for treatment. Fish tanks should be covered or removed and air pump should be shut off.
- Children, children's toys, pet toys, pet food and exposed food should be placed in a protected area.

What You Can Expect From The Treatment:

The treatment will remain effective only if the following steps are taken after your home is serviced:

- DO NOT use other pest control chemicals (powders or sprays) or cleaning products anywhere where treatment was applied (treatment will be applied on baseboards, under and behind appliances, in and around pantries and cupboards, etc).
- Remove all competing food sources (this means keeping all pet foods in tightly sealed containers, cleaning up spills as they occur, removing trash on a regular basis, ensure other foods are in tightly sealed containers).
- Allow 2 weeks for the product to take full effect. If you notice any signs of pest activity after 2 weeks, please report this, as a follow-up treatment may be necessary.
